3. How to use Ventoline
4. Possible side effects
5. How to store Ventolin 100 online
6. Contents of the pack and other information

1.
WHAT VENTOLIN IS AND WHAT IT IS USED FOR

Ventolin 100mcg contains a medicine called salbutamol. This belongs to a group of medicines called bronchodilators.

- Bronchodilators help the airways in your lungs to stay open. This makes it easier for air to get in and out.

- They help to relieve chest tightness, wheezing and cough.

Ventolin Evohaler is used to help prevent and treat breathing problems in people with asthma and chronic obstructive airways disease. Ventolin Evohaler contains a propellant called Norflurane. This is less harmful to the environment than older inhalers. Older inhalers may taste differently to Ventolin Evohaler. This will make no difference to how your medicine works.
